

Seat

Shell Shell is fabricated using virgin polypropylene; a blend of homopolymers, random and polypropylene compounds that are blended together to create a rigid, yet flexible structure that allows for the perfect combination of stability and ergonomic flexibility. Ergonomically designed with integral comfort grip handle for ease of moving. Engineered as a Wall Saver which is designed in keeping the back of the chair from scratching the wall. Shell is blow-molded with a smooth contoured back promotes easy cleaning.

Frame

4 Legged 1" round, 16-gauge heavy duty steel tube legs welded to a steel seat mounting plate. Frame is riveted to the seat making it a sturdier chair. Nylon glide has an internal mount which is a "fish hook" design that prevents loosening over long periods of use.

Cantilever (2 legs) 1" round, 13-gauge heavy duty steel tube legs welded to a steel seat mounting plate. Frame is riveted to the seat making it a sturdier chair. Nylon glides.

Finish Smooth silver powder coated
